PROFESSIONAL SUMMARY

Detection-focused Cybersecurity Engineer specializing in SOC operations, SIEM engineering, and security telemetry analysis. Proven track record of designing, tuning, and validating detection logic across complex network, cloud, and application environments. Adept at automating incident response workflows, conducting rapid malware forensics, and building production-grade security systems that align with modern defensive strategies to minimize organizational risk.

TECHNICAL SKILLS

Security Domains: SOC Operations, Detection Engineering, Incident Response, Vulnerability Management, AppSec, Cloud Monitoring

Malware Analysis & Forensics: Reverse Engineering, Static & Dynamic Analysis, Android SDK, IoC Extraction, Digital Evidence Handling

Tools & Technologies: Rapid7, SonarQube, JFrog, Burp Suite, Nmap, Wireshark, Cuckoo Sandbox, ELK Stack, Splunk, Microsoft Sentinel

Cloud & Infrastructure: AWS (IAM, VPC, Security Groups, CloudWatch), Network Segmentation, Linux (Kali, Ubuntu)

Programming & Scripting: Python, Bash.

PROFESSIONAL EXPERIENCE

Tamil Nadu Cyber Crime Wing (TNCCW)

Cyber Security Intern (Malware Analysis & Development)

Chennai, India

Jun 2026 – Jul 2026

- Reduced manual application triage and reverse-engineering time by 80%, shrinking the forensic timeline from hours to minutes per device for investigating officers.
- Accelerated active cybercrime case resolutions by automating the extraction of malicious network infrastructure, directly enabling the tracing and dismantling of predatory threat networks.
- Streamlined the digital evidence pipeline for state-level law enforcement, contributing to a 40% reduction in pending mobile-malware case backlogs.
- Delivered immediate threat intelligence reports on extortion-based loan apps, protecting victim data and enhancing public safety against financial fraud.

Drestein 25

Security Lead

Chennai, India

Nov 2025 – Nov 2025

- Directed comprehensive security operations and vulnerability testing for the Drestein 25 event web infrastructure.
- Implemented strict OWASP best practices to secure the web application against common vulnerabilities, ensuring data integrity and zero security breaches during the event lifecycle.

- Monitored and triaged high-volume security telemetry across network, authentication, cloud, and application logs.
- Tuned SIEM correlation rules and alert thresholds, successfully reducing false positive alerts by approximately 30%.
- Automated log parsing and alert validation workflows using Python and Bash, improving overall analyst efficiency by 25%.
- Supported incident response operations, directly contributing to a 20% reduction in Mean Time to Respond (MTTR).

PROJECTS

Automated Malware Analysis Platform

- Engineered a full-stack automated analysis tool utilizing Next.js and Python to streamline digital forensics triage for suspicious applications.
- Integrated Cuckoo Sandbox and the Android SDK to execute dual-pipeline static and dynamic analysis, alongside custom backend scripts for isolating and extracting hard-coded IoCs and C2 URLs.

Post-Quantum TLS Readiness & Downgrade Attack Simulator

- Simulated TLS handshake telemetry to proactively detect downgrade attack patterns during transitions to post-quantum cryptography.
- Evaluated cipher negotiation behaviors against NIST SP 800-53 cryptographic controls to ensure compliance and readiness.

Cloud DDoS Detection and Mitigation System

- Developed advanced detection logic to identify abnormal traffic patterns indicative of DDoS attacks and deployed rate-limiting strategies to maintain high service availability.

CERTIFICATIONS

- Google Professional Cybersecurity Certificate
- AWS Cloud Solutions Architect

EDUCATION

Saveetha Engineering College

Student, Bachelor of Engineering in Computer Science and Engineering (Cybersecurity)

Chennai, India

Relevant Coursework: Network Security, Cryptography, Operating Systems, Cloud Security, Secure Systems Design
